

## COMPANY PROFILE

FLASHFORGE USA is disrupting the desktop 3D printing market by introducing easy-to-use 3D printers. Established in 2011, FlashForge has sold thousands of 3D printers worldwide, including the award-winning Creator with dual extrusion. FLASHFORGE USA focuses on making 3D printing widely accessible to institutions, architects, engineers, designers and the broad consumer and prosumer market. FLASHFORGE USA is committed to creating value for its customers by delivering quality, reliable, competitively-priced products and having a dedicated U.S.-based support team.

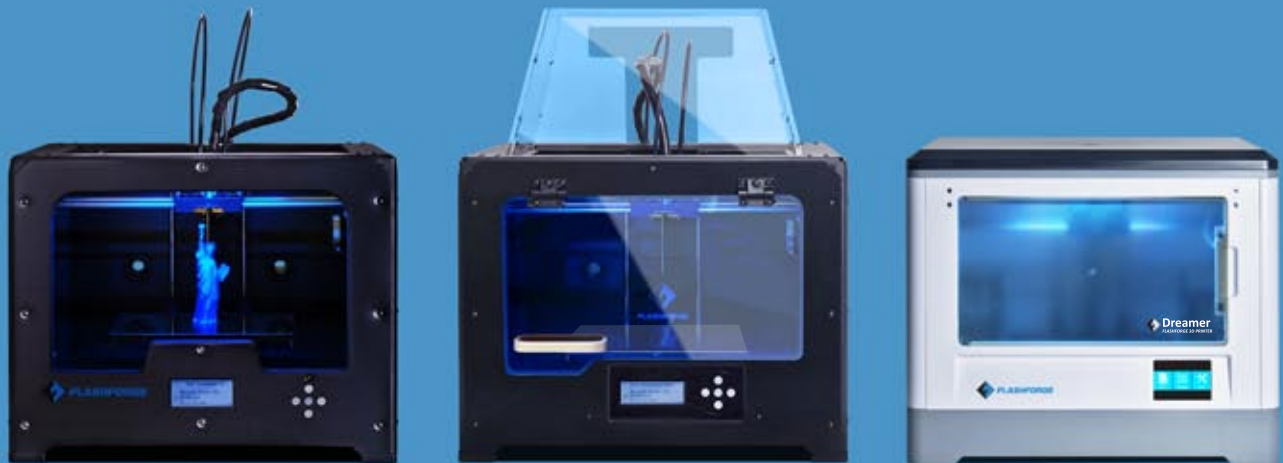

## TWO CORE PRODUCT SERIES

### Creator & Dreamer Series 3D Printer

FlashForge currently offers two 3D printer series: Creator and Dreamer. The Creator series 3D printers target hobbyists and tinkerers who enjoy customizing their 3D printers and truly calling it their own. The Dreamer series is intended for beginners and those who “just want to get things done.”

**C**reator series 3D printers, which include the Creator, Creator X, and Creator Pro, are based on open-source platform. The benefits to this are the freedom to use other 3rd party software and firmware, more choices for customization or modification, and more readily available replacement parts.

**D**reamer series is the first 3D printer to be released with IPS LCD touch screen, and one of the first in the industry to have Wi-Fi printing capability. It is close-sourced and uses FlashPrint software. The Dreamer is developed with simplicity and straightforwardness in mind.
